**MPC Plating Adds New Plastics Plating Line for Exterior Applications**

*New electroplating line produces finished components that meet the most rigid specifications for corrosion and wear resistance*

Cleveland, OH – MPC Plating, a leading provider of chrome, decorative finishes on plastic and metal components, is extending its capabilities with the launch of a new, large capacity electroplating line for plastic components that meet the most rigid specifications for durability and wear resistance.

On-line since July 2009, the electroplating line is designed to handle small, medium and even oversized plastic pieces for exterior use, primarily in automotive, truck and marine applications, that require extra-high durability, corrosion and wear resistance,

“We’re responding to a need in the industry for high-quality, low-cost domestic platers who can meet the rigid durability specifications required for components used in exterior applications,” says Al Walcutt, MPC Plating president.

“We believe MPC now offers the most comprehensive plating services of anyone in the industry,” says Walcutt. “We are a single source for virtually any plating service on small-to-large plastic and metal sized pieces, with all the key finish options, and the highest level of quality.”

The new electroplating process incorporates three additional layers of nickel to the traditional plating formulation, which serves to add considerable strength and corrosion resistance.

Additionally, the new line is designed to handle large-sized plastic pieces, to further extend MPC’s ability to service new and existing customers.

“While other domestic platers may be struggling to remain viable, we are able to expand our services. I think that’s a testament to our quality and our competitive pricing, which consistently earns us repeat business from our customers,” Walcutt says.

MPC Plating has been a leading provider of chrome, PVD and decorative plating for over 30 years. With capabilities for both plastic and metal plating, the full range of finishes and in-house polishing and buffing capabilities, MPC is a start-to-finish provider with a reputation of the highest quality and exceptional service.
